

PARKING BRAKE MODULE

Land Rover Discovery 4 L319

& Range Rover Sport L320 (2010-2013)

Part Number: LR072318P

1. **Do not pull the emergency unlocking cable during installation.** Pulling the emergency unlocking cable may cause issues not covered by the after-sales warranty.
2. **Secure the handbrake motor.** You can plug in the power connector at a later step.
3. **Install the cables:**
 - Begin by installing the large LH (left-hand) and RH (right-hand) cables.
 - Then, install the emergency unlocking cable.
4. **Connect the power connector after installing the wheel hub:**
 - Ensure the brake shoe is not adjusted too tightly.
 - Note that this brake cable is long and has significant contraction. Leave enough tolerance in the brake shoe to prevent over-braking.
5. **Test the brake system:**
 - Start the engine and press the brake pedal.
 - Engage the electronic handbrake switch to test the brake tightness.
 - For optimal results, use a vehicle repair computer to check the braking force (in Nm). Adjust as needed based on the test results.
6. **No programming or coding required:**
 - Once installed correctly, the system can be used immediately without additional programming or coding.
