

PARKING BRAKE MODULE

Land Rover Discovery 4 L319
and Range Rover Sport L320
(2010-2013)

Part Number: LR072318P

1. Do NOT pull the emergency unlocking line. (Any issues arising from pulling the emergency unlocking line is not covered by after-sales warranty).
2. Fixed handbrake motor (the power plug can't be plugged in first).
3. Install the left and right pull wires first, and then install the emergency unlock cable.
4. After installing the hub, plug in the power plug. (Note that the handbrake leather on the brakes disc should not be adjusted too tightly. This handbrake pull line is relatively long and the shrinkage is large, so the handbrake leather should try to loosen the gap of more than 2 laps to avoid the phenomenon of dragging brake).
5. Start the car, step on the brake, press the handbrake switch, and it can be used normally.
6. Note: The handbrake module does not require programming and coding, and can be used normally after direct installation.
