OBDII Function

- > I/M Readiness - I/M Readiness indicates whether or not the various emissions-related systems on the vehicle are operating properly and are ready for Inspection and Maintenance testing.
- > Freeze frame - When an emission-related fault occurs, certain vehicle conditions are recorded by the on-board computer. This information is referred to as freeze frame data. Freeze data is a snapshot of the operating conditions at the time of an emission-related fault.
- > O2 Sensor test - This option allows retrieval and viewing of O2 sensor test results for most recently performed tests from the vehicle's on-board computer.
- > On-Board monitoring - This function can be utilized to read the results of on-board diagnostic monitoring tests for specific components/systems.
- > Evap system test - The EVAP test function lets you initiate a leak test for the vehicle's EVAP system. Before using the system test function, refer to the vehicle's service repair manual to determine the procedures necessary to stop the test.
- > Vehicle information - The option displays the vehicle identification number (VIN), the calibration verification number (CVN), and other information of the test vehicle.
- > Retrieve generic (P0, P2, P3, and U0), manufacturer specific (P1, P3, and U1) codes and pending codes.
- > Turn off Check Engine Light (MIL), clear codes and reset monitors.
- > Multilingual menu and DTC definitions- English, Spanish, and German, etc.
