**WE KNOW YOUR
CAR**

Helping you care for your Land Rover Defender 2007 onwards ('Puma')

Since the early 1980s, Rimmer Bros. has specialised in supplying parts for British cars. In 1982 we started selling Classic Triumph parts and by the mid 80's were supplying stainless steel exhaust systems for Land Rovers and other 4x4 vehicles. In 1993, we added to our range of parts catalogues when we began stocking parts for the Rover SD1.

In the summer of 2000, to celebrate 30 years of Range Rover production, we launched our parts catalogue for the Range Rover Classic. This was a natural move, as a vast number of Range Rovers are powered by the Rover V8 engine - a subject in which we specialise. This was followed by our Discovery, Discovery Series II, Range Rover P38a, Freelander, Defender (up to 2006) and Discovery 3 parts and accessories catalogues. In 2005, Rimmer Bros set up an MG Rover Parts business covering all models and more recently, Jaguar 1998 on.

We are now pleased to introduce our latest parts catalogue for the Land Rover Defender 2007 onwards, frequently unofficially referred to as the Defender 'Puma'. This catalogue lists a continuously growing range of genuine, original equipment manufacturer (OEM) and aftermarket parts and accessories. Our web site also features this catalogue and lists recently introduced products and parts updates.

Please note that our catalogue predominantly covers UK and European Models. Although most parts listed are common to the Rest of the World Markets, there are sometimes specific parts for certain countries that are different to those listed herein. If unsure, please contact us quoting your full VIN number.

Our customers are owners, garages and other specialists looking for a fast, reliable source of original and high quality aftermarket parts and accessories available by mail order or over the counter. We have the latest technology to ensure orders are processed efficiently and despatched promptly to wherever you are - UK or worldwide.

Our aim with this catalogue is to apply our expert parts service to Land Rover Defender 2007 Onwards, helping you to maintain and enhance your vehicle at affordable cost.

APPROVED BY LAND ROVER

Rimmer Bros is an authorised Land Rover Parts Distributor. This means we have access to the full range of genuine Land Rover parts - for every model.

This catalogue features genuine parts throughout - at affordable prices - alongside aftermarket parts.

The added advantage of being able to order a part for any Land Rover from the convenience of your home or workplace, means the Rimmer Bros service is hard to beat!

THE CARS WE SPECIALISE IN

As well as caring for your Defender, we also supply parts for Range Rover, Discovery, Evoque, Freelander, 90/110 & Land Rover 'Series' vehicles. Additionally, we also supply parts for Triumph TR2-8, Stag, Herald, Vitesse, Spitfire, GT6, 2000/2500/2.5Pi, Dolomite, Rover SD1, MG Rover cars including - Rover 100/200/400/600/800/25/45/75/ZR/ZS/ZT, MGF & MG TF. In addition we are developing a range of fast moving parts for Jaguar 1998 on models.

Please refer to inside rear cover for details on all our catalogues.

How to Order

WEBSITE	www.rimmerbros.com
TELEPHONE	UK - 01522 568000 Overseas - +44 1522 568000 From the USA - 1 855 7462767
EMAIL	lrsales@rimmerbros.com
FAX	UK - 01522 567600 Overseas - +44 1522 567600
POST	Triumph House, Sleaford Road, Bracebridge Heath, Lincoln LN4 2NA, England
COLLECT IN PERSON	Our sales counter is open 8.30am-5.30pm Monday-Friday and 8.30am-1pm Saturday. <i>We also offer a 'click and collect' service to save you time.</i>

PAYMENT

We accept all major credit, debit and charge cards and also Paypal on orders where all items are in stock. Orders can also be pre-paid by bank transfer (in GBP/Euro/US Dollar- see website or Price Guide for details) or cheque (in GBP-please allow a few extra days for clearance). If you send cash or Rimmer Bros Vouchers, please use registered mail, as we cannot accept responsibility for any loss.

PRICING

There are no prices in this catalogue. Use it to select the parts you need, then check the cost by referring to our website or the separate Price Guide / CD rom. Our website gives up-to-the minute information regarding availability and the price of any item.

All orders will be invoiced and charged in GBP. All goods are sold subject to the price ruling at the time of invoicing.

VAT

For details on VAT, & VAT exempt sales, please refer to our website, Price Guide or DVD.

THE LAND ROVER PARTS SPECIALIST

PART NUMBERS & IDENTIFICATION

We identify parts so that you know what you are buying. When there are alternatives to the original Land Rover part, we use a simple numbering system so that you can select the part that best suits your needs and budget. This avoids any confusion when comparing quality and price:

- **Genuine (Land Rover boxed) part** – will have a plain number
- **OEM (original equipment manufacturer) part** – will have a P1 suffix
- **Aftermarket (reproduction) part** – will have a P suffix

In addition, there is also equivalence with certain Rover/Triumph numbers or when we use our own part number where no original part number exists.

QUOTATIONS, BACK ORDERS & SPECIAL ORDERS

Quotations

If you require a written quotation for the part(s) and/or delivery charge(s) before ordering, please contact us.

Back Orders

Back-ordered parts are not charged for until despatch. Upon despatch we will charge the price (in GBP) quoted at the time of ordering. Prices will be unaffected by any subsequent price alterations unless advised in writing to you. Please notify us in writing (letter, fax or email) if you wish to cancel any back ordered items. Back orders are automatically cancelled after 3 months. Back Ordered parts will be sent carriage free (some exclusions apply for export overseas). If you would prefer that your order is sent complete, please request this at the time of ordering

Special Orders

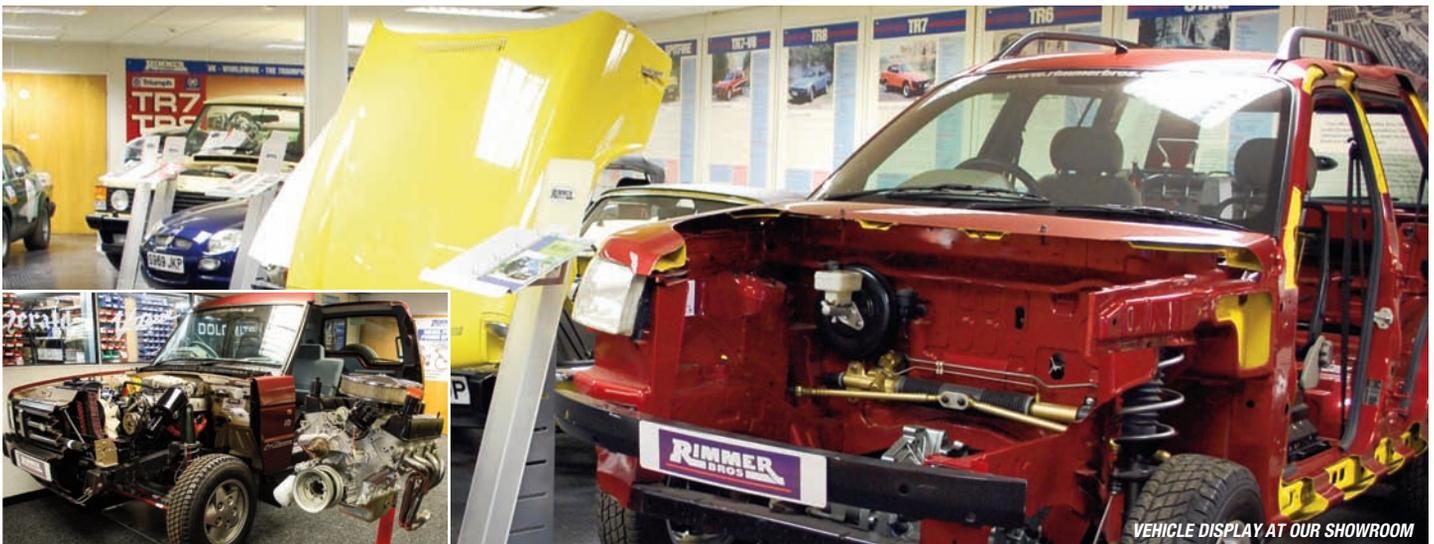

Certain items (coloured trim, carpets, one-off type parts, etc) are sometimes only available by special order. This means we have to order them for you specially from the manufacturer. For this reason, we require a 20% non-refundable deposit upon taking your order. The balance is payable when the goods are despatched. Please note that special order items can take several weeks to be supplied and are non returnable.

DESPATCH AREA

SHIPPING

At Rimmer Bros, we opt to use the best carriers in the business to ensure your order is delivered safely, securely and on time. The shipping method and cost is based upon what you order, where you want the parts sending and how quickly you want them.

Orders are despatched as soon as practically possible. If your parts are required urgently and you want an express delivery service, please tell us.

For shipping methods and guide prices, (including packaging and handling), please refer to our website or Price Guide.

Shipping charges for export of oversize parcels outside the UK may need to be quoted once the order is picked and packed.

Once your order is shipped and providing we have your email address, we will email confirmation to you, including tracking information if applicable.

Delivery times will be dependent on location and delivery method selected.

Please note that certain 'hazardous' products, such as aerosols, paints, fluids and chemicals cannot be sent via post or by air freight.

RETURNS & EXCHANGE OLD UNITS

Returns

Please refer to our website or Price Guide for full details.

All returns must be pre-authorized with a returns authorisation (RA) number. Returned products without an RA number will be subject to delay and possible return to sender. All returns are subject to a physical inspection. **We must have received and inspected the product before an exchange or credit can be issued.**

WARRANTY & LEGAL INFO

Please refer to our website or Price Guide for full details.

Parts Warranty

All new and reconditioned parts are covered by a 12 month manufacturer's warranty unless specifically stated. You should notify us immediately if a potential warranty situation arises. We will then advise a course of action. Any suspected faulty part must be returned to us together with the original invoice or proof of purchase and with as much information relating to the problem as possible. **Please note that a defective part must be returned and received by us before it can be exchanged.** All warranty parts are subject to a physical inspection. This may involve returning the part to our supplier to verify the fault before it can be exchanged.

Legal Info

Errors & Omissions Excepted. Please tell us if you think something is wrong in our catalogue. All parts offered subject to availability. All part numbers, illustrations and photographs used are intended for reference and identification purposes only and are not necessarily an exact representation of the goods supplied. Photographs of parts should be considered indicative of what we supply rather than an exact representation as sources of supply and manufacture can change. Whilst we make every effort to ensure the accuracy of product descriptions, illustrations and photographs, they are based upon information supplied by the manufacturer or distributor at the time. There may be occasions - due to circumstances beyond our control - when specifications are changed, or when goods become temporarily unavailable. Certain part numbers may have been superseded to an alternative number when a later version or updated specification is offered.

Last of A Long, Long Line

Though factually accurate the subheading above might give you the wrong impression about the 2007 onwards Defender. While most definitely being the last of the Defender line, it was actually produced for nine years - a very significant proportion of the Defender's total production period and much longer than the total production life of most vehicles. Most of us who count ourselves as Land Rover enthusiasts still regard the 2007 onwards model (commonly referred to as 'Puma', for reasons explained later) as the newcomer on the block. Also, we still find it hard to believe that we can't buy a new Defender any more (as of early 2018, anyway).

The incredibly long lived and much loved Land Rover's history has many parallels with its diminutive British motor industry counterpart, the classic Mini. Both were in production for several decades: the Land Rover lasted nearly 68 years (the leaf-sprung Series 35 years, the later coil-sprung Defender 33), while the Mini was built for 41 years. Both went through mid-life periods when sales figures fell away, to be followed by miraculous rejuvenation as they achieved cult classic status and moved upmarket for their final production years. Both ended production looking remarkably like their ancestors from those early post-war years, yet actually sharing very few components with them.

The parallels ended with the engines used in the final models. Where the late 1990s Mini still soldiered on with its original, much-modified but still recognisable BMC A Series engine, the 2007 onwards Defender eschewed Land Rover engines for a more emissions-conscious Ford built replacement.

Puma Power

Since 1999 the vast majority of Defenders had been powered by Land Rover's Storm TD5 diesel, with a few overseas markets also offering the option of the old faithful 300 TDi (which was retained for most military applications as well). Neither engine proved viable for modifying to meet forthcoming emissions regulations and, Land Rover no longer being in the business of designing its own engines, the hunt was on outside Land Rover for a new powerplant. Ford owned Land Rover at the time and it didn't take long for engineers to find a suitable replacement engine from the parent company.

Ford's DuraTorq engine family included the Puma ZSD unit, available in several capacities and power ratings and conveniently built at Ford's Dagenham factory in the UK. The 2.4 litre TDCi variant, tried and tested in Ford's Transit, was chosen for the Defender because of its similar power output to the outgoing TD5 and increased low down torque - useful for towing and thus appreciated by many a Land Rover driver. To enable reliable off-road use the lubrication system required modification and the engine needed extra sealing; Transits don't often work at unusual angles or go wading!

Hardened enthusiasts disliked the Puma's quieter engine note. The preceding TD5 had had a rather lovely and Defender-appropriate 5 cylinder purr about it, while the harsher, agricultural clatter of the old 300 TDi kindled memories of diesel Land Rovers right back to the 1950s - and was perversely loved because of it. The truth was, though, that the quieter and less unrefined Puma would attract more customers and help get the Defender to where it aspired to be: a bit more upmarket.

A new gearbox also sourced from the Ford Transit was used, mated to the familiar Land Rover LT230 transfer box. The gearbox was tailored for Defender use, having a usefully low first gear (better towing and off-road control) and a high sixth gear to make cruising and motorway work slightly less of an endurance sport.

More Refinement

On the outside, changes for the 2007 model year were rather thinner on the ground. The eagle-eyed would spot the new Defender graphics on the back panel, new colours, maybe a couple of minor lighting changes and the ever-increasing fitment of alloy wheels; more would notice that the bonnet now sported a power bulge (ok, an engine clearance bulge) instead of a central depression. The famous Land Rover trade mark opening scuttle vents under the windscreen had gone too: a glance in through the windows would reveal why.

The fascia was all new. In place of the previous, rather minimalist, affair that evoked memories of the old Series Land Rovers of the 1970s, the Defender now had a full width, full height moulded dashboard for vastly improved occupant crash protection, equipped with modern(ish) instruments and switches. The heating and ventilation was radically overhauled, too, the most obvious clues being car-like face level vents and more enhanced controls. Behind the dashboard, the new heater and air conditioning worked to create levels of passenger comfort and demisting ability never before experienced in a production Defender.

In Station Wagon models the inward facing rear seats were now outlawed by safety legislation and were replaced by forward facing seats. Ten years before, the 90 Station Wagon would have carried seven people and the 110 Station Wagon a maximum of twelve, albeit in utilitarian fashion. Now the 90 would seat just four and the 110 only three more, but in more comfort (well, a bit) and certainly more safely.

A new Utility Wagon model based on the 110 Station Wagon was made available as a showroom model for the first time in 2007. Featuring the Station Wagon's 5 door body it deleted the rearmost seats and the rear side sliding windows, to make a useful and adaptable five seater van. This reflected the Defender's gradual change into a more family and leisure orientated product that could still cut the mustard as a work tool during the week; it quickly became one of the most popular Defender body styles.

Another body style to become popular in the last years of Defender production, again largely targetted at the leisure market, was the reintroduced 90 soft top model which made its general debut in 2011. Deleted from civilian Defender options many years previously, the soft top found a whole new crowd of admirers upon its relaunch. The instantly recognisable soft top body harked right back to the very first Series Land Rovers of the 1940s and 50s and was to become a very useful image to Land Rover's marketing department when planning the run-out models celebrating the end of Defender production in 2015-16 (a bit like the retro-themed Seven and Cooper run-out models of the Mini, back in 2001).

2012 Model Year: The Ultimate Defender

And here come the parallels with Mini again. The Mini needed a final, significant revamp (the 'Continuation' project) to stay on the right side of new regulations that would be introduced during its last three to four years of production, taking it up to the time of the launch of New Mini. While inception and development of New Defender took place behind the scenes, the re-engined 2012 model year Defender would see the vehicle through to the planned end of its production life.

Ford would not modify all of its Puma range diesel engines to meet the forthcoming Euro Stage V emissions regulations. The 2.4 litre TDCi was one engine in the range deemed not economic to modify, whereas the 2.2 litre version with similar power and torque outputs was made Euro Stage V compliant. Thus the Defender received a new engine again, this time a little smaller in capacity but of such similar performance that most drivers would be unlikely to notice much or any difference. Along with the new engine came a diesel particulate filter (DPF) in the exhaust system, the first time this device had been fitted to a Defender.

Through the 2000s, the frequency of Defender limited editions had been increasing. From 2012 onwards the marketing of Defender as an iconic leisure item rather than as a work tool was in full swing and the limited editions, some country-specific, came thick and fast. Three more very special editions commemorated the end of production in 2015-16: the ready-for-action Adventure Edition, the retro-themed Heritage Edition (with graphics featuring the 'HUE166' number plate of the very first Land Rover) and the luxurious, ultra-exclusive and more powerful Autobiography Edition. All were available in 90 or 110 wheelbases, though the Autobiography could only be had as a 90 in the UK.

The last Defender of all, a Grasmere Green Heritage Edition 90 Soft Top bearing the registration H166 HUE, rolled off the end of Land Rover's Lode Lane, Solihull production line on the 29th January 2016, watched with dewy eyes by the world's press and 700 assembled guests, mainly drawn from Land Rover employees past and present.

You can no longer walk into a Land Rover showroom and buy a new Defender. Somehow, despite the presence of posh Range Rovers and workaday (or rather slightly less posh) Discoveries, the showrooms just don't seem complete without a Defender, the honest, no-holds-barred product that defined Land Rover. Fingers crossed that the new Defender, when it finally arrives, has the character and ability to fill that gap and make the Land Rover family whole again.

VEHICLE IDENTIFICATION

To ensure the parts that you order are correct for your Land Rover Defender, you will need to know most importantly the VIN (vehicle Identification Number).

Additionally when ordering engine parts you will also need to know the engine number. Gearbox, overdrive and axle numbers may be required to order parts for those major units.

VIN (Vehicle Identification Number)

The last six characters of the VIN are the serial number of your car. However, the VIN also provides you with considerably more useful information, most importantly the model year of your car (most changes in production relate to model years). It will also tell you the original factory specification of your car - particularly useful given the Meccano kit nature of the Defender which results in an innate (and unmatched) ability to have its body, trim or mechanical specification changed with relative ease. Many Defenders end up with a specification far removed from that with which they left the production line! The complete VIN can be broken down thus:

1st, 2nd & 3rd characters -	SAL = Jaguar Land Rover
4th character (marque) -	L = Land Rover
5th Character (model) -	D = Defender
6th Character (class) -	H = 110 inch K = 130 inch V = 90 inch B = 110 inch extra heavy duty W = 90 inch extra heavy duty
7th Character (body style) -	A = Regular B = 3 door station wagon F = 4 door crew cab, not HiCap H = HiCap with or without 4 door crew cab L = Soft top M = 5 door station wagon N = Hard top R = Single cab pick up S = Double cab pick up T = 2 door HiCap pick up V = Crew cab HiCap pick up W = 2 door chassis cab X = 4 door chassis cab Y = 5 door utility station wagon
8th Character (engine) -	P = 2.2 litre, EU5 Euro spec. R = 2.2 litre, rest of world spec. (not EU5) S = 2.4 litre, EU4 Euro spec. T = 2.4 litre, rest of world spec. (EU2) N = 2.4 litre, EU4 Euro spec. (military 24V) W = 2.4 litre, rest of world spec. (EU2, military 24V)
9th Char. (steering & g/box) -	7 = RHD 6 speed manual 8 = LHD 6 speed manual
10th Character (model year) -	7 = 2007 model year 8 = 2008 model year 9 = 2009 model year A = 2010 model year B = 2011 model year C = 2012 model year D = 2013 model year E = 2014 model year F = 2015 model year
11th Character (mfg. plant) -	A = Solihull, UK C = Zimbabwe D = Thailand F = Knocked down kit J = Malaysia K = Kenya P = Pakistan W = Turkey
12th to 17th Characters -	999999 = serial number

Example:

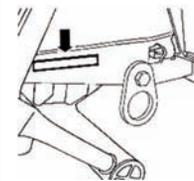

A vehicle showing SALLDHMP7DA444247 is - Land Rover Defender, 110, 5 door station wagon, 2.2 litre EU5 Euro spec., RHD 6 speed manual, 2013 model year, Solihull plant, serial no. 444247

Engine Number, Gearbox Number, Transfer Box Number, Front & Rear Axle Numbers

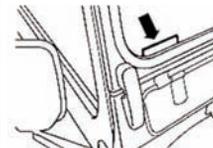

In contrast to earlier models, the major unit serial numbers on 2007 onwards Defenders have little or no significance when determining what parts to order or use. All powertrain and drivetrain change points on these later vehicles are documented by VIN only in Land Rover parts catalogues. As the most obvious example of how this works, the 2.4 litre engine was fitted up to the end of the 2011 model year, the 2.2 litre engine taking over from the 2012 model year onwards. As far as Land Rover are concerned, this change point would be shown as 'up to (VIN) BA999999' and 'from (VIN) CA000001 on'.

VEHICLE IDENTIFICATION NUMBER (VIN)

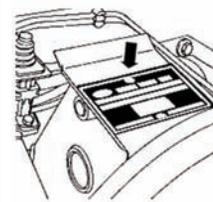

The following illustrations show where the vehicle identification number (VIN) is located on the 2007 onwards Land Rover Defender:

1. Stamped on the RH side of the chassis towards the rear of the front lashing eye.

2. At the bottom of the windscreen glass on the RH side of the vehicle, visible from the outside.

3. On a plate attached to the brake pedal box in the engine compartment.

VEHICLE PRODUCTION SUMMARY

2007 Model Year

The previous TD5 (civilian) and 300TDi (military) models are replaced by a heavily revamped Defender. The new model features the 4 cylinder 2.4 litre TDCi ZSD engine, codenamed 'Puma', from the Ford Duratorq engine family, hence the unofficial name 'Defender Puma' applied to 2007 onwards models. The 'Puma' is destined to be the last in a long, long line of recognisably similar Land Rover Series and Defenders.

Other significant changes over previous Defenders include a 6 speed 'MT82' gearbox to replace the old 5 speed R380, a new fascia assembly, gauges, switches and heating system (resulting in the deletion of the Land Rover trade mark opening scuttle vents), plus the replacement of inward facing rear seats by forward facing in station wagon models.

2008 Model Year

The SVX limited edition is launched to celebrate 60th anniversary of Land Rover. It includes new lighting and styling features that set the tone for future limited editions and accessory styling products. The mechanically standard SVX is available in 90 or 110 wheelbases, although the 110 is only available outside the UK.

2012 Model Year

The 2.2litre TDCi power unit replaces the 2.4 litre. The new engine (new to Land Rover - it was an existing Ford unit, re-engineered) is Euro Stage V Emissions compliant and features a diesel particulate filter (DPF) in the exhaust system, for the first time on Defender.

2015 Model Year

Following on from a run of commercially successful limited editions (echoing the last years of the similarly long lived classic Mini over a decade earlier), three 'run out' editions are introduced to commemorate the end of Defender production: Heritage, Adventure and Autobiography. The most expensive factory-finished civilian Defenders yet, they are also among the most exclusive; UK availability totals just 400, 600 and 80 vehicles respectively. Defender production ends on 29th January 2016 amid huge media attention after 2,016,933 UK built vehicles (plus countless more built overseas).

Land Rover	2	RRC3352
lower		
aftermarket	2	LR018027P
Land Rover	2	LR018027

DISLOCATION CONES, pair:

When longer than standard rear shocks are fitted, the coil spring can become dislodged on full suspension drop out, sometimes failing to relocate correctly when the suspension compresses again. Fitting dislocation cones in conjunction with coil spring retaining plates will ensure the spring re-seats correctly every time.

WASHER, bush, upper & lower shock mountings:

upper outer		
aftermarket	2	RYF500210P
Land Rover	2	RYF500210
upper inner		
aftermarket	2	RYF500220P
Land Rover	2	RYF500220
lower		
Land Rover	2	RYF500230

NUT, rear shock mounting:

upper	2	NY120041
lower	2	RYH501080

MOUNTING BRACKET, rear shock absorber, upper:

standard		
aftermarket, each	2	LR041260P
Land Rover, each	2	LR041260

updated, dropped eye-mounting shock type

For lifted vehicles (up to 50mm) using standard height shock absorbers - drops upper shock mounting points.

Bearmach, pair	1	LR041260BMDROP
Terraforma, pair	1	LR041260TFDROP

updated, pin-mounting shock type

For lifted vehicles using extra long travel shocks with pin type upper shock mountings.

Bearmach, pair	1	LR041260LTBP
Terraforma, pair	1	LR041260TFELT

MOUNTING BRACKET, rear shock absorber, lower:

Britpart, standard, pair	1	LL1506BP
--------------------------	---	-----------------

MOUNTING KIT, twin rear shock absorbers:

additional mounting type

Provides mountings for additional shocks on opposite side of axle to original rear shock mountings (which are retained and still used).

Britpart	1	LR041260URTWINBP
Bearmach	1	LR041260URTWINBM

twin parallel mounting type

Upper and lower mountings, using original mounting points, enabling shock absorbers to be mounted parallel with each other.

Terraforma	1	LR041260FTWIN
------------	---	----------------------

REAR FUEL FILTER RELOCATION KIT 1

When fitting long travel rear shocks and upper brackets, it may be necessary to move the fuel filter with this relocation kit.

BOLT, upper shock mtg bracket	6	RYP501140

	DESCRIPTION	QTY REQ.	PART No.	DESCRIPTION	QTY REQ.	PART No.	DESCRIPTION	QTY REQ.	PART No.
Service Kits	ARB Air Locking Differential Locking Kit								
Filtration	DIFFERENTIAL LOCKING KIT, Air Locker: <i>The advantage of the ARB Air Locker lies in the pneumatically operated locking system inside the differential. When activated, the Air Locker prevents the differential gears from rotating and therefore prevents the axle shafts from turning independently of each other. With both wheels tied directly to the rotation of the crown wheel, the vehicle maintains maximum possible traction at all times. When unlocked, it operates just like a conventional 'open' differential. Requires compressor and switch to operate.</i>								
Wipers	for standard axle	A/R	LL1160						
Windscreen & Rear Window Washers	All models except those with P38A type diff.								
Lighting	for axle with 205mm dia. flanges	A/R	LL1162						
Bulbs	All models with P38A type diff. (with 205mm dia. flanges), most commonly vehicles with traction control.								
Drive Belts	AIR COMPRESSOR, on-board	A/R	LL1163BP						
Glow Plugs	For differential air locker. Also for general use as on-board air compressor.								
	SWITCH, air compressor	A/R	LL1419BP						
	Dashboard switch for use with on-board air compressor/diff. locking kit.								
	COVER, air compressor switch:								
	For use with on-board air compressor/differential locking kit.								
	marked 'ARB Compressor'	A/R	LL1420BPCOMP						
	marked 'Front Air Locker'	A/R	LL1420BPPFRONT						
	marked 'Rear Air Locker'	A/R	LL1420BPREAR

ELECTRIC FAN CONVERSION KIT 1 LL1830

Revotec kit, supplied complete with all necessary fittings and fixings to complete an electronic fan conversion. Easy to fit with basic hand tools. Engineered to fit without any permanent modifications. OEM components used throughout. Latest fan and controller technology used together for the ultimate cooling package.

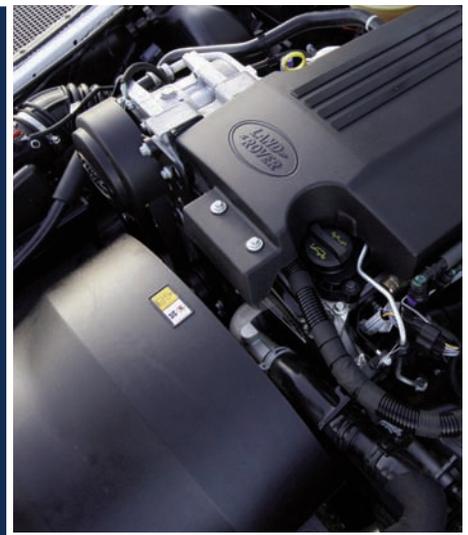

ELECTRIC FAN CONTROL SWITCH 1 RX1816

Rotary switch allowing override of automatic Revotec electric fan control. Enables manual selection of 3 fan settings: on, off or automatic. Very useful for towing or off roading (wading).

Touch Up Paint

Filtration

Confirming the correct paint colour name for your car may be done by reading the paint name on the VIN plate, under the bonnet. Touch up pencils and aerosols for all of the standard paint colours are listed here, together with the Land Rover three digit codes for each colour (car body repair workshops know and match your car's colour by this code).

Wipers

For reference purposes the Land Rover/MG Rover standard three letter codes are also shown; you will see these letter codes used as suffixes on the part numbers of colour coded spare parts. For example, some of the touch up paint part numbers on this page use them - a paint pencil in Rimini Red is VEP501730CBK, where VEP501730 is a paint pencil and CBK is Rimini Red.

Windscreen & Rear Window Washers

Lighting

Certain fleet operators, like the AA, had their cars factory finished in their colour scheme. Some of these fleet colours are available as touch ups but are not listed here - please contact us with your vehicle's details if you require one.

Bulbs

Each standard colour paint touch up kit includes both base colour and top coat lacquer, in either pencils or aerosol cans. Lastly, just to say Land Rover classify Izmir Blue as being in the Silvers. That's where you'll find it on this page, rather than under Blues - it's not an error!

Drive Belts

please note **AEROSOLS**
Please note: Aerosols are classed as hazardous and that shipping restrictions apply. Aerosols can not be exported and can only be sent via carrier (not post) to UK mainland destinations. Touch-in pencils and aerosols are non-returnable.

Glow Plugs

GREYS

TOUCH UP PAINT KIT:

Corris Grey (873/LKH)			
pencil	A/R	VPLDC0004LKH
